

## Make the right choice...

**BioDesign** Mammary Implants (Polyurethane foam coated mammary implants) are the Dream implants, for you and for your patient. One of the surgeon's main concerns while planning a mammoplasty, be it aesthetic or reconstructive, is to minimise the possibility of capsular contracture, rotation or detachment of the implant.

In this sense, the BioDesign Mammary Implants, polyurethane foam coated, provide significant advantages when compared to other types of implants. Throughout the last twenty years, several scientific studies have been completed with a large number of patients. They point towards very low rates of capsular contracture, which, in some studies, amounts to around only 1% (\*) after 10 years of implantation.

### EXTRAORDINARY CARE

**Combining professionalism and compassion in striving for the healing and wellbeing of patients.**

#### Make the right choice...

Breast augmentation is one of the most frequently performed cosmetic procedures today. Women consider breast augmentation for various reasons namely: Increase breast size and/or shape, full reconstruction following mastectomy, correction of a congenital deformity or replacement of an existing implant.

The decision to have a breast augmentation is a serious consideration, as is any surgical procedure. Equipping oneself with a full understanding of the procedure, having confidence in the surgeon and having realistic expectations of the procedure and related limitations are crucial.

When choosing a supplier, remember that the company's history shows the solidity behind a brand. Make a conscious choice and offer your patient the safest product. **Surgitech (Pty) Ltd** is the official distributor for the Silimed Range of products in Southern Africa. Silimed is the first and only company that manufactures silicone implants in Latin America.

The Silimed range of products for aesthetic and reparatory purposes is the most wide-ranging and diversified in the market and the only one that shows the serial number on each product manufactured, thus assuring **100% security** in product traceability since its manufacturing.

### SPECIALISATION

**Dedicated to meeting the exacting requirements of modern surgical specialities.**

In 2008, Silimed launched **BioDesign**, the most complete and sophisticated line of breast implants in the market, the results of its 30 years of experience and partnership with global plastic surgery.

The novelty presented by the new **BioDesign** line is the variety of shapes of base and profile and four different projections for each model, which brings a great possibility of making the right choice of implant for the patient.

Hence the name **BioDesign**: a line of mammary implants which helps the physician to plan and develop a customised result for the biotype of the patient.

### STATE-OF-THE-ART-PRODUCTS

**Forging solid relationships with renowned international manufacturers, and carefully reviewing their latest surgical developments.**
